TEST ADDRESS: 174 Beals Hill Road
Waterville, VT 05492 USATEST FLOOR: 1st Floor
TEST LOCATION: Dining Room**RADON HEALTH RISK INFORMATION:**

Radon is the second leading cause of lung cancer, after smoking. The more elevated a home's radon level, the greater the health risk to you and your family. Smokers and former smokers are at especially high risk.

Radon concentration is measured in picocuries per liter of air (pCi/L). The US Environmental Protection Agency and the Surgeon General strongly recommend taking further action when the home's radon test results are 4 pCi/L or greater. Even homes with very high levels can be reduced below 4 pCi/L. The EPA recommends that you use a NRPP or state-approved contractor to correct radon problems. Radon levels less than 4 pCi/L still pose some risk and in many cases may be reduced. If the radon level in your home is between 2 pCi/L and 4 pCi/L, the US Environmental Protection Agency and the Surgeon General recommend that you consider correcting the problem in your home.

QA/QC - Alpha Energy Tests have an estimated accuracy of $\pm 5\%$ when used according to directions.

PLEASE NOTE: Test results are only indicative of the sample collected. If proper testing procedures were not followed, results may not be representative of your radon levels. One sampler can test an area up to 2,000 square feet.

HOW CAN I FIX A RADON PROBLEM?

If your radon level is at or above 4 pCi/L, you should fix your home. If your radon level is between 2 pCi/L and 4 pCi/L, you may wish to fix your home. For most homes, radon levels can be lowered to 2 pCi/L or lower.

We recommend only hiring contractors who are certified and trained in radon mitigation. To find a certified contractor you can:

Call your State Radon Contact at (802) 865-7762 or go to DrHomeAir.com/States

Go to DrHomeAir.com/Mitigation for a list of NRPP certified contractors
